

From bumpers to brackets, great finishes are what we start with.

At American Metal Coatings, great finishes are only the beginning. We start with a durable powder coating finish. Then we add attention to detail, exceptional customer service, and our sincere commitment to excellence.

Beginning with our automated 5-stage washing process, we ensure that each individual item we powder coat receives a smooth, uniform finish that can easily meet or exceed customer expectations.

And, unlike solvent-based painting, our dry powder paint is applied and then oven-cured for an exceptionally tough, impact-resistant coating.

But best of all, powder coating is extremely cost-effective and environmentally friendly verses other paint methods.

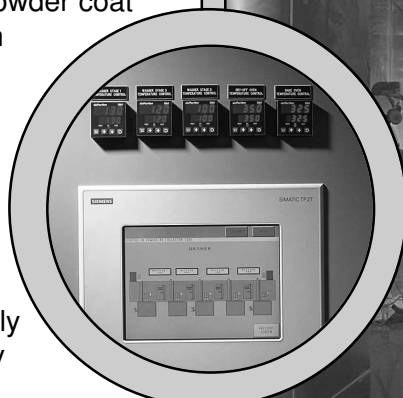

It's easy to see why, from start to finish, American Metal Coatings is the choice for affordable powder coating!

Call American Metal Coatings today, and put us to work for you!

WHAT WE OFFER

- 24-hour turnaround availability
- No minimum or maximum quantities
- Custom powder coat colors
- Competitive pricing
- System capabilities on parts up to 4'W x 6'H x 24'L
- Plastisol (PVC) coating capabilities on part sizes up to 3'W x 19"H x 8'L
- An electronic washer chemical monitoring system, to ensure cleanliness of parts which facilitates maximum adhesion of powder coatings.

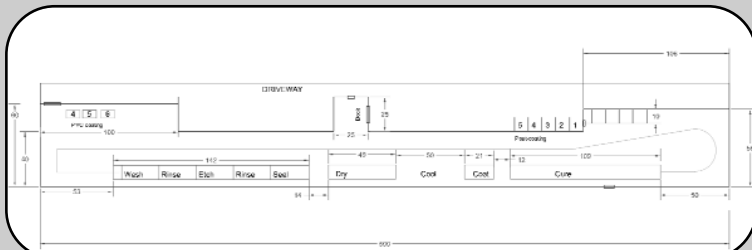

Our state-of-the-art washer control system ensures optimum conditions.

Our over-sized booth can accommodate a single large part or multiple small parts.

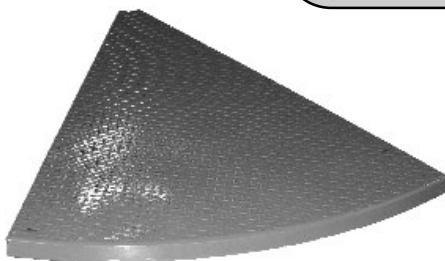

Our facility has large part PVC coating capability.

Single turn production line provides efficient powder coating of long parts.
